MARIA BLANDZI

Engineer | Automotive · Software · Embedded Systems
Poland | +48 793 123 121 | mariablan.racing@gmail.com

PROFILE

Engineer with a background in computer science and ongoing studies in mechanical & automotive engineering. Interested in the intersection of vehicle technology, electronics, software and data. Experienced in developing practical technical solutions, working with real-time vehicle data and building end-to-end systems. Combines software development with hands-on automotive projects and motorsport experience.

TECHNICAL SKILLS

Programming: Python · C++ · SQL
Automotive & Embedded: ESP32 · RS232 · Vehicle Telemetry · Data Acquisition
Engineering: MATLAB · Simulink · Stateflow · Control Systems
Other: Git · GitHub · Data Processing · Excel · Technical Documentation

EXPERIENCE & PROJECTS

Race Engineer — LRP Poland | Seasonal

FIM Endurance World Championship (EWC)

- Developed an ESP32-based trackside device for stint management, lap counting and Safety Car tracking
- Developed data-driven tools for race strategy and operational decision-making
- Performed real-time performance analysis in a high-pressure motorsport environment
- **EWC events:** Le Mans 24 Hours (2026) · 8 Hours of Spa (2025) · Bol d'Or (2025, 2026)

Electric BUGGY — Embedded & Automotive Systems

- Developing an **ESP32/C++ telemetry system** for an electric vehicle
- Implementing communication with a Kelly motor controller via **RS232**
- Receiving, parsing and processing motor RPM, current, voltage and battery data
- Developing data flow from the controller to storage and a dedicated dashboard

OCR-Based Data Processing System

- Designed a **Python pipeline** converting video telemetry into structured, validated data
- Automated text extraction, parsing, cleaning, validation, aggregation and report generation
- Developing the project towards **academic publication**

NCBR Scholarship Uczelnie Przyszłości — Individual Innovation Project
IOIO GO: Early Warning System for Emergency Vehicles

EDUCATION

- **BEng in Computer Science – completed in February 2026**
  Final grade: 4.5 / 5.0
- **BEng in Mechanical & Automotive Engineering – ongoing (2024-2028)**

MathWorks Courses: MATLAB Onramp, Simulink Onramp, Stateflow Onramp, Control Design Onramp with Simulink

LANGUAGES

- Polish (native)
- English (C1 – Cambridge CAE)
- German (B2 - ACERT)
